Finistar Market Update

In Today's Markets Quality and Safety Matter

Watching the financial markets recently, you have seen high volatility and investor concern. You have probably also heard the terms "credit crunch" and "flight to safety." Recent articles in the Wall Street Journal and on the Motley Fool investor website have discussed the risk to money market funds that may be heavily invested in commercial paper and repurchase agreement obligations. These articles remind us that while financial instruments such as commercial paper and repurchase agreements may be conservative, they still bear market and credit risk. Another crucial point that has been reinforced is that diversification among different investments is always a prudent choice.

We wanted to take the opportunity to remind you of the safety of a Finistar account. A Finistar account is 100% FDIC insured and represents a very safe short term cash management tool in any portfolio. The FDIC insurance assures clients that there is no principal or credit risk. Finistar accounts have no commercial paper or repurchase agreements that may pose some principal and/or credit risk. Deposit balances through Finistar are available daily and carry a competitive annual percentage rate of 5.16% with an annual percentage yield of 5.28% while our Gold Source program has a annual percentage rate of 5.26% which has an annual percentage yield of 5.39% for the month of August.

These turbulent times in the market place usually present the opportunity to review your portfolio for safety and earnings. If you are a Finistar client, we thank you for your business. If you would like more information on how to become a Finistar client please contact us at 1-877-346-4782.
